(Why Should I Be A Periodontist??)

24th August 2023 Thursday

VDC

VISHNU DENTAL COLLEGE

VISHNU
UNIVERSAL LEARNING

Periodontics one of the vital clinical branches of dentistry is not only pertained to treatment of gingival diseases but also has its roots diversified into non-surgical periodontal therapy, alternative Periodontics, Periodontalmedicine, Surgical periodontics, regenerative Periodontics and Implantology. Unfortunately at the undergraduate level of teaching, this rapidly growing science has pertained itself to the basic procedural treatment of oral prophylaxis. This has made an impression on not only the student community but also on the other dental specialities that this science of Periodontics is very well confined to the study of gingiva and its surrounding tissues. To come out of that cocoon department of Periodontics, Vishnu Dental College, Bhimavaram has come up with an unique 1 day virtual program of

“WHY SHOULD I BE A PERIODONTIST”? in order to give insights into this wonderful science and help students know the scope and prospects of Periodontics. We invite all the Interns and Neet aspirants to be part of this one day program and experience the journey of Periodontist’s all over the world.

SPEAKERS
